STAINLESS STEEL WAFER DOUBLE DOOR CHECK VALVE

Check valve is also known as the "non-return valve" or "one way valve" because they only permit the media flow in one direction. The main purpose of a check valve is to prevent backflow in the piping system.

Fivalco's F51DD16-50 and F51DD16-51 stainless steel body double door check valves are wafer connection designed to various standards such as BS 4504 PN16, EN1092-2 PN16, ANSI#150, JIS 10K, etc. The check valves are spring loaded center guided with extended seat for non-slam effect.

It is suitable for air-conditioning, cold water plumbing, hot water system, process cooling, and other general industries. Kindly contact your local distributors or our sales representatives for more information.
