

THE FEATURES & ADVANTAGES OF OUR UL/FM GATE VALVES

OUR PRODUCTS

SEALING

The sealing design is patented and has a self-locking function. It is convenient for valve assembly and greatly improves the sealing performance at the middle port of the valve.

OTHER BRAND

WORKING PRESSURE

Our valves boast an impressive working pressure capability of 365psi, surpassing the industry standard and outperforming other brands. This ensures reliable and efficient operation even under high-pressure conditions.

365 PSI
PN25

OUR PRODUCTS

DISC SEAL

The valve plate seal adopts double sided line seal, and the self-sealing structure is protected by patent. The valve has higher sealing performance and longer service life.

LARGER SIZES

Our valves stand out for their ability to accommodate larger sizes, up to **12** inches, surpassing the capacity of many other brands could offer.

STEM

The valve stem is made of SS304 material, and most other brands in the market are made of SS420 material. The valve stem diameter is 15% larger than other products in the market.

OTHER BRAND

YOKE

The strength of the bracket surpasses the AWWA standard and is stronger than most other brands' products in the market, which prevents the valve from bending, deforming or even breaking during the lifting or installation process.
